PLP-AssemblyTutorial

Shadi Vandeventer

October 2026

1 Preparation

To prepare for my tutorial, please clone this repository: `https://github.com/snowjademusic/PLP-AssemblyTutorial`

1. Follow the instructions for your architecture.
2. Verify that building the Hello, World! script for your architecture works (all steps should be explained).

I could only test the Linux x86-64 and Mac x86-64 version. Should the instructions for your architecture not work, please contact me @ shadisamuelthierry.vandeventer@uzh.ch.

Optional VS Code Extensions

If you're using VS Code as your main IDE, I can recommend the NASM Language Support Extension if you're on an x86_64 CPU. For ARM CPUs, maybe try Assembly for ARM64.
